

LESSON 4

HTML BASICS

OBJECTIVES

Define HTML

Identify the
basic html
document
structure

Use the different
formatting
elements

WHAT IS HTML?

HTML

WELCOME TO HTML!

- HyperText Markup Language
- Uses **tags** to identify content
- Used to **create** web pages

<p>I'm a paragraph**</p>**

QUESTION

- What does a markup language use to identify content?
 - a. tags
 - b. commands
 - c. functions
 - d. scripts

THE WEB STRUCTURE

- **Modern Web Design**

HTML: Structure

CSS: Presentation

JavaScript: Behavior

PHP or similar: Backend

CMS: Content Management

HTML: HyperText Markup Language

- a **formatting language** used to define the **appearance** and **contents** of a **web page**
- allows us to organize text, graphics, audio, and video on a web page

HTML: Key Points

- **Hypertext:** text which acts as a link
- **Markup:** symbols used to define structure of the text, tells the browser how to display the text and are often called tags
- **Language** refers to the syntax that is similar to any other language

HTML VERSIONS

Version	Year
HTML	1991
HTML 2.0	1995
HTML 3.2	1997
HTML 4.01	1999
XHTML	2000
HTML5	2014
HTML 5.1	2016
HTML 5.1 2 nd Edition	2017
HTML 5.2	

W3C

WORLD WIDE WEB CONSORTIUM

- called as w3c
- the main **international standards organization** for the World Wide Web
- founded in **1994**, currently **led** by **Tim Berners-Lee**
- <http://www.w3.org/>**

WORLD WIDE WEB CONSORTIUM

- made up of **member organizations** that maintain full-time staff **working together** in the development of standards for the www
- Goal:** for the Web to connect humanity in a way that makes access to knowledge more efficient and equitable

HTML Standard

Type of content	HTML 1.2	HTML 4.01	HTML5	Purpose
Heading	Yes	Yes	Yes	Organize page content by adding headings and subheadings to the top of each section of the page
Paragraph	Yes	Yes	Yes	Identify paragraphs of text
Address	Yes	Yes	Yes	Identify a block of text that contains contact information
Anchor	Yes	Yes	Yes	Link to other web content
List	Yes	Yes	Yes	Organize items into a list
Image	Yes	Yes	Yes	Embed a photograph or drawing into a web page
Table	No	Yes	Yes	Organize data into rows and columns
Style	No	Yes	Yes	Add CSS to control how objects on a web page are presented
Script	No	Yes	Yes	Add Javascript to make pages respond to user behaviors (more interactive)
Audio	No	No	Yes	Add audio to a web page with a single tag
Video	No	No	Yes	Add video to a web page with a single tag
Canvas	No	No	Yes	Add an invisible drawing pad to a web page, on which you can add drawings (animations, games, and other interactive features) using Javascript

Reading

1. View the two versions of HTML
 - [HTML 1.2](#)
 - [HTML5](#)
2. Read: Brief History of HTML

HTML EDITORS

For Diff OS

FOR WINDOWS OS USERS

- Notepad
- Wordpad
- Microsoft Word
- Microsoft Visual Web Developer
- Adobe Dreamweaver
- WeBuilder
- Visual Studio Code
- TextEdit
- iWeb
- Pages

FOR LINUX OS USERS

- Vi
- Emacs
- Gedit
- Kate

ARRANGE THE WEB STRUCTURE

</body>

<html>

</title>

<meta>

<!DOCTYPE html>

<title>

</head>

<body>

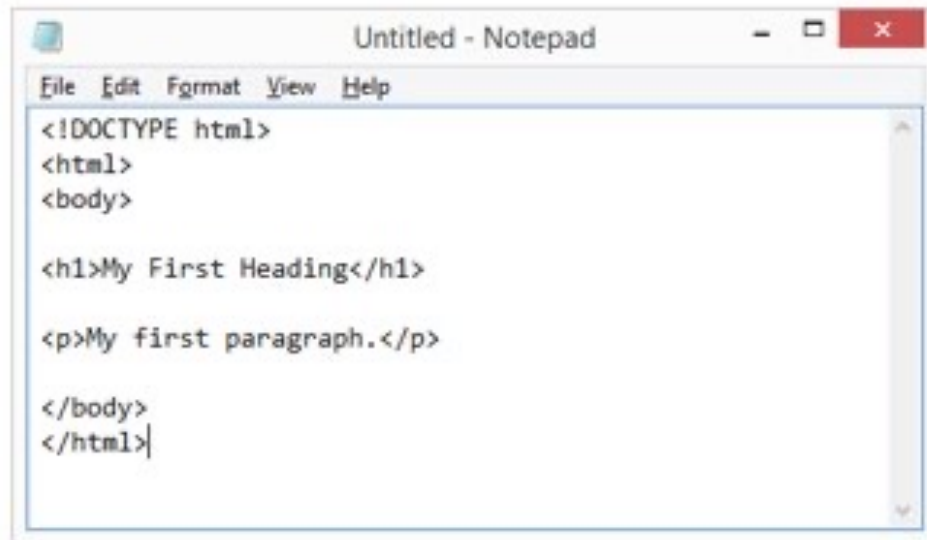

</html>

<head>

Learn HTML using the Text Editor

1 Open Editor

2 Write some HTML

A screenshot of a Notepad window titled "Untitled - Notepad". The menu bar includes File, Edit, Format, View, and Help. The text area contains the following HTML code:

```
<!DOCTYPE html>
<html>
<body>

<h1>My First Heading</h1>

<p>My first paragraph.</p>

</body>
</html>
```

3 View the page in Browser

BASIC HTML DOCUMENT STRUCTURE

Creating Your First HTML Page

THE `<!DOCTYPE>` DECLARATION

- represents the document type, and helps browsers to display web pages correctly
- not case sensitive
- declaration for HTML5

THE `<html>` TAG

- Everything in an HTML document is surrounded by the `<html>` tag

`<html>`

...

`</html>`

THE `<head>` TAG

- Contains all of the **non-visual elements** that help make the page work

```
<html>
```

```
    <head> </head>
```

```
</html>
```

THE `<body>` TAG

- All **visual-structural elements** are contained
- Defines the **main content** of the HTML document

```
<html>
```

```
    <head> </head>
```

```
    <body>
```

```
    </body>
```

```
</html>
```

TRIAL

```
<html>
```

```
  <head> </head>
```

```
  <body>
```

```
    Hello World
```

```
  </body>
```

```
</html>
```

THE `<title>` TAG

- To place a title on the tab describing the web page

```
<html>
```

```
  <head>
```

```
    <title>My First Page</title>
```

```
  </head>
```

```
  <body>
```

```
    Hello World
```

```
  </body>
```

```
</html>
```

HTML DOCUMENTS

- must start with a document type declaration **<!DOCTYPE html>**
- begins with **<html>** and ends with **</html>**
- visible part is between **<body>** and **</body>**

HTML ELEMENTS

Paragraph, Heading, Formatting

HTML ELEMENT

- start tag, some content, and end tag

<tagname>Content goes here...</tagname>

HTML ELEMENT

- everything from the start tag to the end tag:

<h1>My First Heading**</h1>**

<p>My first paragraph.**</p>**

- Note: Some HTML elements have no content (like the **
** element) – empty elements (no end tag)

Nested HTML ELEMENT

- **all** HTML documents consist of nested HTML elements.

```
<!DOCTYPE html>
```

```
<html>
```

```
<body>
```

```
<h1>My First Heading</h1>
```

```
<p>My first paragraph.</p>
```

```
</body>
```

```
</html>
```

HTML HEADINGS

- Six levels, which are ranked according to importance

`<h1>This is heading 1</h1>`

`<h2>This is heading 2</h2>`

`<h3>This is heading 3</h3>`

`<h4>This is heading 4</h4>`

`<h5>This is heading 5</h5>`

`<h6>This is heading 6</h6>`

HEADINGS ARE IMPORTANT

- **Search engines** use the headings to index the structure and content of your web pages
- **<h1>** headings should be used for main headings, followed by **<h2>** headings, then the less important **<h3>**, and so on

PARAGRAPH ELEMENT: `<p>`

```
<html>
  <head>
    <title>My First Page</title>
  </head>
  <body>
    <p>This is a paragraph.</p>
    <p>This is another paragraph.</p>
  </body>
</html>
```

PARAGRAPH ELEMENT: `<p>`

`<p>`

This paragraph
contains a lot of lines
in the source code,
but the browser
ignores it.

`</p>`

`<p>`

This paragraph
contains a lot of spaces
in the source code,
but the browser
ignores it.

`</p>`

HORIZONTAL RULES: `<hr>`

`<h1>`This is heading 1`</h1>`

`<h2>`This is heading 2`</h2>`

`<h3>`This is heading 3`</h3>`

`<hr>`

`<h4>`This is heading 4`</h4>`

`<h5>`This is heading 5`</h5>`

`<h6>`This is heading 6`</h6>`

`<hr>`

`<p>`This is a paragraph`</p>`

SINGLE LINE BREAK: **
**

```
<html>
  <head>
    <title>My First Page</title>
  </head>
  <body>
    <p>This is a paragraph.</p>
    <p>This is another paragraph.</p>
    <p>This is <br> a line break</p>
  </body>
</html>
```

THE POEM PROBLEM

<p>

My Bonnie lies over the ocean.

My Bonnie lies over the sea.

My Bonnie lies over the ocean.

Oh, bring back my Bonnie to me.

</p>

<pre>

- defines a block of **preformatted text**
- multiple spaces, carriage returns, and tabs are all preserved exactly as they appear in your document

FORMATTING ELEMENTS

- Designed to display special types of text

<p>This is regular text</p>

<p> bold text </p>

<p> <big>big text</big> </p>

<p> <i>italic text</i> </p>

<p> emphasized text </p>

<p> <small>small text</small> </p>

<p> <mark>marked text</mark> </p>

HTML QUOTATION AND CITATION ELEMENTS

<blockquote>

- Provides a **long quotation** from the work or review of the people
- **Indents a block of text** and set off longer quotations

<p>Here is a quote from WWF's website:</p>

<blockquote cite="http://www.worldwildlife.org/who/index.html">

For 50 years, WWF has been protecting the future of nature.

The world's leading conservation organization,

WWF works in 100 countries and is supported by

1.2 million members in the United States and

close to 5 million globally.

</blockquote>

< q >

- Defines a **short quotation**

< p > WWF's goal is to: < q > Build a future where people live in harmony with nature. < / q >

< / p >

<abbr>

- Used to indicate that the text is a shortened form of a longer word or phrase

<abbr title="Before the Birth of Christ">

B.C

</abbr>

<address>

- Used to **supply contact information** about a person, company or organization responsible for creating the document the user is viewing

<address>

Larra Mae Balisi<br \>

Web Developer <br \>

Cagayan, Philippines

</address>

< cite >

- Used to provide a bibliographic citation or reference, such as person, the title of a book poem, song or movie, it may also be the name of a magazine, newspaper or website

Love is blind. < cite > Dagul < / cite >

<bdo>

- stands for **Bi-Directional Override**
- used to override the current text direction

<bdo dir="rtl">This text will be written from right to left**</bdo>**

COMMENTS: `<!-- comm-->`

- **Not displayed**, but they help document the HTML and add descriptions, reminders, and other notes

`<p>This is a paragraph</p>`

`<hr / >`

`<p>This is a paragraph</p>`

`<!-- This is a comment -->`

<center>

- Sets its content **centered** horizontally inside the web browser

<center>

Larra Mae Balisi<br \>

Web Developer <br \>

Cagayan, Philippines

</center>
